5 Points

1. Relative and Absolute path

2. Linking to another html page in same directory

3. Linking to another html page in different directory

4. Linking to an email address
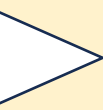

5. Opening the link in new page

Relative and Absolute path

❑Relative Path

▪ A relative path specifies the location of a file or resource relative to the current location of the HTML file.

✓<img src=''images/image.jpg'' alt="an image">

❑Absolute Path

▪ An absolute path specifies the full or complete path to a file or resource from the internet.

✓<img src= "https://git-scm.com/docs/git" alt="image">

Linking to another html page in same directory

❏ To link to another html page in same directory using relative path, you can use the '<a>' element with 'href' attributes.

- About

Linking to an email address

❑ **Use mailto**: inside the **href** attribute to create a **link** that opens the user's email program

- ▪ Send email

Linking to another html page in different directory

❑ To link to another HTML page located in a different directory using a relative path, you'll need to specify the path that leads from the current directory to the target directory and file.

❑ <a href="about.html">

Opening the link in new page

❑ The HTML <a> tag defines a hyperlink

▪ syntax: link text
